

# Using Groups in Academic Advising

---

Kathy Stockwell

## Abstract

Although individual advising is recognized as the ideal delivery method for advising programs, there are times when one-on-one advising is not possible or necessary. When done well, group advising can meet many of our students' needs without sacrificing the principles of developmental advising. In fact, group advising offers the potential of connecting students with a peer group in addition to an advisor. This session will explore the benefits and methods of delivering group advising; the keys to successful group advising, and assessment of group advising. Participants will share their experiences with group advising methods and outcomes.
