WIKI, WIKI: How to Present the Same OL' Information in a Quick and Student Friendly Format

Today's tech-savvy student wants information at the click of a mouse. Unfortunately, an advising center's website is oftentimes buried within the college's website, which is usually a small part of a very large University's website. Navigating through multiple web pages frequently results in frustrated students. New technology, however, offers advising centers the ability to avoid these format limitations by creating a simpler, more relatable alternative for students.

In this session, the presenters will introduce the concept of an advising center Wiki. They will share their personal experience of developing and creating a Microsoft Sharepoint Site and will demonstrate the functionality of it. Attendees will learn about additional software options for developing a Wiki that is more applicable to their advising center.
