Mechanics and Ethics of Reporting Data

Don’t be afraid of the data! Assessment can provide you with both positive and negative results. Developing a transparent process to gather, analyze and report your results can only benefit your program. In this session we will discuss the ethics behind true-data reporting, how the negative can create a positive and how you can create an environment open to change through reporting the data.

Session Outcomes - you will learn:
- Ethics of research methods
- The value in knowing strengths and limitations of your practices
- How to create a solution-focused approach when reporting data
- Understanding bias and external/internal influences
